

FnO Momentum Scanner (Streamlit)

Setup

```
pip install -r requirements.txt
streamlit run app.py
```

Token configuration

Add your Upstox access token in `.streamlit/secrets.toml`:

```
[upstox]
access_token = "YOUR_UPSTOX_ACCESS_TOKEN_HERE"
```

The app reads the token automatically from `secrets.toml`.
You can also override it anytime via the sidebar text input.

Features

- Builds first 15-minute high/low reference levels automatically
- Scans all configured FnO stocks on every 1-minute candle
- Three filters per direction:
 - F1: Price breakout above 15m High (bull) / breakdown below 15m Low (bear)
 - F2: EMA9 crosses above EMA21 (bull) / below EMA21 (bear)
 - F3: RSI(10) crosses above SMA14 of RSI(10) (bull) / below (bear)
- Auto refresh: syncs to the next candle close and re-runs the scan automatically
 - Configurable interval: 60s / 2min / 5min
 - Shows live countdown timer between scans
 - Toggle on/off from sidebar
- Filter funnel stats (F1 → F2 → F3) for both bull and bear
- Styled tables with colour-coded Chg% and filter badges
- Scan log with history

Notes

- API calls are backend (Python), so no browser CORS issues
- Instrument master is cached in session state, loaded only once
- Reference levels are rebuilt automatically if missing on first scan

- Use Rebuild Ref button to force rebuild (e.g. after 9:15 AM reset)
